

Product Wise Invoice Customer Portal

App: avinashgroup_app **Author:** Abhidha **Status:**  Implemented & verified on `mysite1` (deploy + restart workers on live)

Today's changes, in order. Each task: **What & why** → **How it works** → **Files** → **How to test** → **Gotcha**.

1. Party Ledger — "Show Contract Form" default ON

What & why: The `show_contract_form` filter now defaults to **checked (1)**. Previously it defaulted to unchecked, which hid Journal Entries of JV type "Contract Form". Default-on means those entries are **included** by default; the user can untick to hide them.

How it works: - Only the **filter default** changed (`0` → `1`) in the report JS; the server logic was already in place. When the box is **ticked**, the report skips the `NOT EXISTS` clause that excludes `Journal Entry.custom_p_type = 'Contract Form'`; when unticked, those JEs are excluded. - Applied to the shared `conditions`, so opening balance + period rows stay consistent.

Files: - `avinash_group_app/report/party_ledger/party_ledger.js` — filter `default: 0` → `default: 1` (and the explanatory comment flipped). - `avinash_group_app/report/party_ledger/party_ledger.py` — existing `show_contract_form` gate (unchanged).

How to test: Open **Party Ledger** → "Show Contract Form" is ticked → Contract-Form JEs appear in the ledger. Untick → they disappear.

 Client-side default only — hard-refresh the report page so the browser loads the updated JS.

2. Customer Statement — hide deposit / security accounts

What & why: The customer-facing **Customer Statement** must not show deposit / security accounts (cylinder deposits, dealer security deposit), and they must not affect the running balance. These are not trade balances and shouldn't appear on a customer's statement.

How it works: - Added a **gated** exclusion to Party Ledger's `execute`: when the caller passes `exclude_account_patterns` (a list of `account_name LIKE` patterns), it adds `gle.account NOT IN (SELECT name FROM tabAccount WHERE account_name LIKE ...)` to the shared `conditions` — so **opening + period rows** both drop them and the running balance stays correct. - Matched on `account_name` (not the numbered id), so every company's variant is excluded regardless of its number/abbr suffix. - The Customer Statement page passes the patterns in both `get_statement` (screen) and `download_pdf`.

Excluded accounts (`EXCLUDE_ACCOUNT_PATTERNS`): | Pattern | Account | |-----|-----| | Deposit Customers Cylinders% | 313101 Deposit Customers Cylinders (I) | | Record of Deposit Cylinders% | 313102 Record of Deposit Cylinders (1013) | | %Security Deposit%Dealer% | 313201 Security Deposit from Dealers (live server) |

Files: - `avinash_group_app/report/party_ledger/party_ledger.py` — new gated `exclude_account_patterns` block (after the Contract-Form gate). - `templates/pages/customer_statement.py` — `EXCLUDE_ACCOUNT_PATTERNS` constant, passed in `get_statement` and `download_pdf`.

How to test: Open `/customer_statement` for a customer who has deposit-account entries → those lines are gone (screen + PDF). The **desk Party Ledger report still shows them** (it doesn't pass the filter). Verified on Karnali: 17,683 → 17,440 rows (243 deposit lines dropped), no SQL errors.

 The desk report is unaffected by design. The dealer account doesn't exist on `mysite1`; the `%Security Deposit%Dealer%` pattern catches it on the live server. If its name won't contain both "Security Deposit" and "Dealer", update the pattern.

3. Product Wise Invoice Details — new customer portal page

What & why: A customer self-service version of the **Sales Analysis Product-wise Invoice Details** report, scoped to the logged-in customer's own customer(s), **with returns** and **without Agent rows**.

How it works: - New portal page at `/product_wise_invoice_details` (title "Product Wise Invoice Details"). - **Security:** reuses the Customer Statement guard — `_get_portal_customers`, `_get_allowed_companies`, `_resolve_request` — so a portal user only ever sees their own customers (empty selection → their customers in the company, never "all"). - **Reuse:** `get_data` calls the report's `build_rows(filters, include_return, include_agent=False)` — `include_agent=False` drops the "No Agent" / Agent Sales / Returns /

Net rows. Rows are flattened by `_shape` (product / customer / section / invoice / summary) for an HTML table. - **Filters:** Company (defaults to **Nepal Gas Karnali** when available), From/To date (AD YYYY-MM-DD text + Nepali BS picker), **Include Return** toggle (default on).

UI styling (this page): all text black; header bar grey (#6c757d); proper checkbox with black accent; product/customer rows show **Code in column 1, Name in column 2** with a gap above each product block; the "Invoice"/"Return" label sits in the Invoice Number column.

Files: - `templates/pages/product_wise_invoice_details.py` — `get_context` , whitelisted `get_data` , `_shape` . - `templates/pages/product_wise_invoice_details.html` — filters + table render (inline JS). - Reuses `avinash_group_app/report/sales_analysis_product_wise_invoice_details/` .

How to test: Log in as a customer portal user → `/product_wise_invoice_details` → pick a company with data (e.g. Nepal Gas Karnali) → product → customer → Invoice + Return rows, **no Agent rows**.

⚠ If the default company has no sales (e.g. Grihalaxmi) you'll see "No invoices found" — switch the Company dropdown. Server-side change → the dev server auto-reloads; on live, restart workers.

Files changed — summary

File	Change
<code>report/party_ledger/party_ledger.js</code>	<code>show_contract_form</code> default <code>0</code> → <code>1</code> .
<code>report/party_ledger/party_ledger.py</code>	Gated <code>exclude_account_patterns</code> exclusion (opening + period).
<code>templates/pages/customer_statement.py</code>	<code>EXCLUDE_ACCOUNT_PATTERNS</code> ; passed in <code>get_statement</code> + <code>download_pdf</code> .
<code>templates/pages/product_wise_invoice_details.py</code>	New — portal page server (<code>get_context</code> , <code>get_data</code> , <code>_shape</code>).
<code>templates/pages/product_wise_invoice_details.html</code>	New — portal page UI.
<code>docs/Docs of Reports- Abhidha.md</code>	Updated to document the above (Party Ledger, Customer Statement, new portal page).

Deploy notes

- Python changes (`party_ledger.py`, `customer_statement.py`, the new portal page) need the web workers reloaded — auto on the dev server; **bench restart** on live.
- JS change (`party_ledger.js`) — hard-refresh the browser.
- No schema/migration changes.
